

ABHISHEKH JAISI

Backend Developer | Node.js

Mohali, Punjab • +91 7086173493 • abhishekhj63@gmail.com • LinkedIn • GitHub

PROFILE SUMMARY

MCA graduate (2024) with around 2 years of hands-on experience building backend systems using Node.js, Express.js, PostgreSQL, and Sequelize ORM. I've worked on real client projects involving JWT-based auth, RBAC, real-time features with Socket.io, payment integration using Razorpay, and Redis caching. Currently working full-time at Kindlebit Solutions while sharpening DSA and system design skills to grow into a strong full stack engineer.

TECHNICAL SKILLS

Languages:	JavaScript (ES6+), TypeScript
Backend:	Node.js, Express.js, REST API Design, Socket.io, Node-Cron, Razorpay Payment Gateway
Frontend:	React.js, HTML5, CSS3
Databases & ORM:	PostgreSQL (Aiven Cloud), MongoDB, Sequelize ORM, Redis
Auth & Security:	JWT, Bcrypt.js, RBAC, Helmet, Joi, Input Sanitization, Session Auth
File & Email:	Multer (file uploads), Nodemailer (OTP & transactional email)
AI & Integrations:	Google Gemini AI API, MCP Server (Model Context Protocol)
Tools:	Git, GitHub, Postman, Swagger, VS Code, DBeaver, Aiven Cloud, MongoDB Compass
Concepts:	MVC Architecture, Async/Await, Migrations & Seeders, WebSocket Communication, Redis Caching, Global Error Handling

WORK EXPERIENCE

Backend Developer | Kindlebit Solutions | Mohali, Punjab | Mar 2026 – Present

- Built REST APIs for a multi-role event management app where Admins and Employees each get their own routes and business logic — no overlap, no extra permissions.
- Set up JWT-based login with RBAC so each user role only gets access to what they need.
- Designed the PostgreSQL database on Aiven Cloud using Sequelize ORM, wrote migrations and seeders from scratch so schema changes are tracked and rollbacks are easy.
- Added real-time notifications using Socket.io, OTP emails via Nodemailer, and background job scheduling with Node-Cron.
- Integrated Razorpay payment gateway — handled the full flow including checkout, webhook events, and duplicate payment prevention.
- Set up Redis caching to cut down repeated DB hits, and added Helmet, Joi validation, and a central error handler to keep the API clean and secure.

Process Associate, Medical Billing | 5-Tek Medical India Pvt. Ltd. | Mohali | Feb 2025 – Feb 2026

- Handled day-to-day billing operations while continuing to self-study backend development after hours to get back into software engineering full-time.

Software Developer Associate (Internship) | IT-ITeS Sector Skill Council | Aug 2023 – Feb 2024

- Built REST APIs with Express.js and Node.js — clean route structure, proper HTTP status codes, and input validation.
- Implemented JWT login and Bcrypt password hashing; added Redis caching and rate limiting to handle load better.

PROJECTS

Essence – Event Management Platform

Node.js, Express.js, Sequelize, PostgreSQL, Socket.io, Nodemailer, Razorpay, JWT, Helmet, Joi

- Backend for a client-facing event platform — multi-role login (Admin/Employee), event CRUD, and attendee tracking with role-based data access.
- Real-time notifications via Socket.io; OTP email flows with Nodemailer; automated email reminders using Node-Cron.
- Razorpay payment integration with full webhook handling and duplicate transaction prevention.
- All schema changes managed via Sequelize migrations and seeders; Redis caching, Joi validation, and a global error handler baked in.

StyleSpot – Full Stack Fashion App

HTML, CSS, JavaScript, Node.js, Express.js, MongoDB

- Built the full stack — responsive frontend plus backend REST APIs for product listing and user actions, with MongoDB as the database.
- Wrote optimized MongoDB queries to keep product browsing fast even with dynamic filters.

AI Chat Web App

Node.js, Express.js, Google Gemini AI API, MCP Server

- Integrated Gemini AI API for real-time multi-turn chat — full conversation context sent with every request.
- Modular route and middleware setup; central error handling for API failures, rate limits, and timeouts.
- Configured MCP Server for structured AI tool communication and extensible context passing.

User Authentication & Authorization System

Node.js, Express.js, MongoDB, JWT, Bcrypt.js

- Built a full auth system — register, login, logout, and session management with JWT token rotation and expiry.
- Mongoose schema with validation, indexing, and field constraints; Express-Validator used to block injection attacks on all inputs.

EDUCATION

Master of Computer Applications (MCA)

Chandigarh University, Mohali | 2022 – 2024

Bachelor of Science

Dibrugarh University, Assam | 2018 – 2021

Intermediate (12th) – Science

Digboi College, AHSEC | 2016 – 2018
